Good morning,

Campus Energy would like to submit the follow comments for the regulatory proposal:

1. Can the CER provide the formulas for calculating the projected levies so we can determine the sensitivity to throughput.
2. If not included consider incorporating length into the levies determinations so fees are proportional to throughput-km's
3. Consider just capping the levies at 2% of cost of service – remove the application for relief process
4. Consider a transition period for intermediate and small producers the projected increases are several times the current levies
5. Suggest maintaining a flat amount for the intermediate and small producers that is inflation adjusted.

Thank you,
